

Level 6 Capstone Proposal

App Idea

- I would like to build upon my level 5 capstone by integrating users, and their shoes.
- The website will be named Sneaker-Heads which is a social media type site made for people who love shoes. They can post their shoes with title, description and image. Others can comment on the shoes. There will be a home page with a pinterest style layout that shows all of the shoes. Each user will have a profile page which shows all of their shoes and the shoes that they have 'liked'. Each shoe will also have its own page, with title description and comments.
- MVP on this project should be the project in its entirety, based on the given project I should be able to provide all capability within a week.
- Optional: shoe leaderboards (for those who have the most shoes), user to user messaging, facebook sign in.

User Stories

- Sneaker Head: loves shoes, wants to talk about them, share their own collection, get involved in the community.
- Person that likes shoes: Just wants to browse around, check out some shoe collections, maybe read some comments, maybe likes a couple of shoes.
- Casual: just wants something to do, just checkin out some shoes.
